ADDY MACHINERY COMPANY

Regarding your question: "Why do we continue to buy replacement gears, sprockets and pulleys from Motion Systems"? Trust and peace of mind are the answers.

When we put their products on our used machinery to re-sell, we don't have to worry about the quality or pre-mature failure of your products. They build to OEM specifications and can reverse engineer replacements from chewed up pieces, even without a print.

Today everyone wants the cheapest price and price is important as long as you don't care if it's made off-shore from cast-with sloppy machining specs. This "dollar-store" stuff has an accelerated wear and failure rate and you don't want to own this vendor gear when your lines go down.

Motion Systems makes it in the U.S. from the best tool steel and does it right every time. We never sweat their stuff giving us problems. They don't cut corners, and even the rush stuff is done right, on-time. The Dad (Bill) and the three brothers (Pat, Greg & Sean) have been at it I think over 30 years. They specialize in the quick turn-around and big stuff (gears up to 14' diameter).

I could say other 'stuff' but you get the picture. They're good. Give'm a call.

Thank you,
Jay Addy
